

Dear Sir/Madam,

I hope this email finds you well. My name is Mark van de Streek and I'm twenty years old. I'm currently third-year bioinformatics student at the Hanze University of Applied Sciences in Groningen, Netherlands. I am writing to express my interest in the possibility of interning at your research group.

I'm passionate about bioinformatics and would like to gain practical experience during my upcoming internship in the first half of the next school year (2024-2025).

During the last years, I have gained some experience in the following subjects: gene expression analysis, modelling, next-generation sequencing analysis, pipeline development, machine learning and much more. Additionally, I also have some experiences with the following programming languages: R, Python, MySQL and Java.

During my internship period, I would love to develop an application. I have a great interest in designing and making applications. During my bachelor's degree I also opted for a deeper look into application development. I created a web app for a software company.

I could create a web app during my internship, but it could also certainly be another type of application.

I'd love to discuss the potential for an internship and how I can fit into your team's goals. I would be thrilled to provide more details about my qualifications and discuss how my skills align with the goals and needs of this internship.

Furthermore, I understand that internship opportunities can be limited, and I'd like to ask for your help. If you are unable to offer an internship at this time, would you kindly consider connecting me with other internships that might have suitable opportunities? I would greatly appreciate any assistance you can provide me.

Thank you for considering my inquiry. I look forward to the opportunity to connect with you. Please feel free to reach out to me.

Thank you for your time and consideration.

Sincerely,

Mark van de Streek
Hanze University of Applied Sciences
